

Lecture 41 — Capstone studio

Mon Dec 7

Last updated: August 18, 2026.

The class outline for this day will be posted before class.

Related reading and the course-wide list of daily objectives: [Lectures](#).

Learning objectives

By the end of class, students should be able to:

1. Implement and validate a low-rank computational strategy.
2. Measure approximation error, storage, and runtime.
3. Separate one-time factorization cost from repeated-use cost.
4. Compare theoretical operation/storage counts with empirical measurements.
5. Debug and refine an analysis collaboratively while retaining individual understanding.
