

Quiz 8

Friday, November 6 — products, powers, and computational cost (Week 10)

Last updated: October 5, 2026.

Covers the week before only: [Products](#), [Powers](#), [Cost](#), and the [micro-lab](#) (Week 10). Same-day [determinants](#) and this week's inverses/rank lectures are **not** on this quiz.

Textbooks: [Boyd & Vandenberghe \(VMLS\)](#) · also on [Resources](#).

[Schedule](#)

Core

- B 10.3, 10.5, 10.6, 10.7, 10.9, 10.10, 10.13, 10.14, 10.15, 10.22
- C8.1: Compare $(ab^T)c$ with $a(b^Tc)$.
- C8.2: Count intermediate stored values for both evaluation orders.
- C8.3: Interpret ABx as a sequence of transformations; decide whether $AB = BA$ in a small example.

Stretch

B 10.18, 10.23.

What a quiz item might change

The order of two transformations, matrix dimensions, or timing output from two equivalent computations.
