Midterm 1

Friday, October 2 — in class (exam not posted)

Last updated: October 8, 2026.

In class for the entire period on Friday, October 2. See the schedule and the day page Lecture 16. **The exam itself is not posted online.**

Covers Lectures 01–14 and skills from Quizzes 1–4 (including Lab 0 ideas).

Prepare

1. Study guide — learning outcomes, how to build a definitions/formulas list, rework lecture and quiz examples.
2. Practice packet — definitions, easy computations, harder problems (answers at the end).

Wednesday, September 30 is a prep day: Lecture 15.

Learning objectives

By the end of the exam, students should be able to:

1. Compute with vectors and linear functions.
2. Interpret vector operations in context.
3. Analyze distance, similarity, span, and independence.
4. Select and communicate an appropriate method.
