

Quiz 7

Monday, October 26 — linear dynamical systems and Lab 3

Last updated: August 18, 2026.

Related lectures: [Dynamics](#), [Simulation](#), [Through time](#).

Related lab: [Lab 3](#).

[Schedule](#)

Core

- B 9.1
- B 9.2(a–b)
- B 9.3(a)
- L Ch. 5 Ex. 2, selected matrix-construction and simulation parts only
- C7.1: Build a transition matrix from a verbal description.
- C7.2: Compute two states by hand.
- C7.3: Simulate 50 states.
- C7.4: Plot every state component.
- C7.5: Check whether a conserved total remains constant.
- C7.6: Change one transition rate and compare outcomes.
- C7.7: Compare runtime for two simulation horizons.

Stretch

B 9.3(b); design a three-state model from a context; identify one limitation of the model.

What a quiz item might change

One transition percentage, a trajectory plot to interpret, or a three-compartment story from which you construct the matrix.
