Lecture 42 — Capstone presentations / gallery walk

Wed Dec 9

Last updated: October 8, 2026.

Textbook: Boyd & Vandenberghe, *VMLS* (PDF)

Gallery / presentation day for the capstone (no new mathematics lecture). Related objectives: Lectures. Schedule.

Prepare before class

1. Finish the quantitative comparison from Monday's studio (Lecture 41).
2. Prepare a short explanation: problem, why SVD (or related tool), evidence, limitation.
3. Bring one clear figure or table (error / storage / runtime vs rank or encoding).

Learning objectives

By the end of class, students should be able to:

1. Explain the problem and why SVD or another linear-algebra tool was appropriate.
2. Present quantitative evidence about accuracy and cost.
3. Defend a choice of rank or representation.
4. Evaluate classmates' methods constructively.
5. Communicate the practical value and limitations of the result.

Agenda

- Format reminder: lightning talk or gallery station (as announced in class).
- Present / walk: problem → method → numbers → limitation.
- Peer feedback focused on evidence and clarity (not polish alone).
- Closing: how capstone ideas connect to final-exam SVD / low-rank questions (final practice Section C–D).
