

Quiz 3

Friday, September 18 — norm, distance, angle, and similarity

Last updated: September 11, 2026.

Related lectures: [Norms](#) (norm, distance, RMS, standard deviation; Octave/Python), [Angle](#), [Neighbors](#).

[Schedule](#)

Core

- B 3.1, 3.2, 3.10, 3.11, 3.12, 3.13, 3.15, 3.23, 3.24, 3.28
- L Ch. 1 Ex. 2(c–d), norm/unit-vector portions
- C1.1: Compute distances from one observation to five candidates.
- C1.2: Compare the nearest result before and after rescaling one feature.

Stretch

B 3.9, 3.22, 3.26.

What a quiz item might change

Three short vectors, one feature's scale, or a choice between Euclidean distance and cosine similarity with a justification.
